

23/24

contour®

contour is the culmination of more than 40 years of experience in the development and manufacturing of climbing skins. Back in 1975, we started manufacturing them ourselves in our family-run business in Tyrol.

100 % "made in Austria", contour climbing skins have proven performance in the harshest conditions throughout the world, whether in ski mountaineering competitions or simply skinning up the local slopes.

latest generation adhesive technology

hybrid is the first-ever twin layer adhesive technology for climbing skins. The upper layer sticks the skin firmly to the ski even at low temperatures. It is easy to remove and does not leave any residue on the ski base. The lower layer binds the upper layer of adhesive to the skin backing.

The result: the hybrid technology combines the qualities of hot-melt skins and 'glueless' skins.

Quick and easy customisation: All **contour** hybrid trimmable skins feature our easytrim fit system for simple, easy customisation using the offset hybrid cutter. The clever bit is: we've split the backing foil lengthways into 3 strips.

So, when applying the skins to trim them, it is only the central strip of the backing foil that is removed. Leaving the backing foil in place over the edges makes it smoother and neater to trim them with the offset hybrid cutter. The metal ski edges stay clear and repositioning the skin is no longer necessary. Then all that's left to do is remove the two outer strips of backing foil and you're done

MINIMAL EFFORT

required to separate adhesive sides from each other

NO MORE RE-GLUING

simply wash the adhesive layer to restore tackiness

PERFECT ADHESION

perfect ski base adhesion also on multiple ascents

RELIABLE

excellent tack even at very low temperatures

hy brid

backing film is split into three sections

offset cutter, included with all hybrid skins

hot melt

The **hot melt** adhesive technology is an absolute classic. Whether it is a one-day ski tour or a multi-day traverse with many ascents and descents – hot-melt climbing skins won't let you down and have a high adhesive strength in all temperatures.

Another advantage is the small pack size and, when using the protective foil, pulling the skins apart is no problem.

What happens if the adhesive strength decreases after many outings in the snow?

The adhesive strength can be restored using the contour glue in tubes. In addition, contour transfer tapes can be used to renew the entire adhesive layer – simply by ironing on.

TRIED AND TRUSTED HANDLING

Thanks to traditional hot melt adhesive technology

SIMPLE RENEWAL

Restoration of the adhesive strength with contour glue in tubes or contour iron-on transfer tapes

RELIABLE ADHESION

High adhesive strength in all temperature ranges, even on multiple ascents

CLASSIC TOURING

The gold standard in climbing skins.

Made with **100%** mohair plush for superior glide performance, these skins are perfect for lengthy, demanding tours. And thanks to the hybrid adhesive technology they are super easy to handle and provide excellent tack even on multiple ascents.

It's the little details that make the difference:

- **Quick and easy customisation:** All hybrid trimmable skins feature our easytrim fit system for simple, easy customisation using the hybrid cutter, included with each pair of skins.
- **The tail clip sits flush, even on rounded ski tails.** For tails thicker than 5 mm using the 'wide' tail clip is recommended.

Trimming set includes offset cutter, cleaning wipes and stuff sack with microfibre cloth to clean and dry ski base before applying skins.

Universal length: The skins come with tip fixes plus tip buckles in a choice of two different widths. This means you can cut the skins down to the right length and select the appropriate tip buckle for your skis. The rivets are easy to affix using a hammer.

PFOA-free impregnation to prevent water absorption and clumping

hybrid pure
100% mohair

Our classic all-rounder.

The mixed mohair plush ensures maximum durability and good glide performance. And the hybrid adhesive technology means they are super easy to use.

It's the little details that make the difference:

- Quick and easy customisation: All hybrid trimmable skins feature our easytrim fit system for simple, easy customisation using the hybrid cutter, included with each pair of skins.
- The tail clip sits flush, even on rounded ski tails. For tails thicker than 5 mm using the 'wide' tail clip is recommended.

Trimming set includes offset cutter, cleaning wipes and stuff sack with microfibre cloth to clean and dry ski base before applying skins.

Available in fixed lengths* or an adjustable version.

Universal length: The skins come with tip fixes plus tip buckles in a choice of two different widths. This means you can cut the skins down to the right length and select the appropriate tip buckle for your skis. The rivets are easy to affix using a hammer.

PFOA-free impregnation to prevent water absorption and clumping

hybrid mix

mohair blend

THE ultimate freeride skin.

hybrid FAT free skins boast all the qualities you look for in your freeride kit: small pack size, transferable to a range of skis, minimal maintenance. These skins can be adjusted by up to 10 cm in length and are designed for skis with a minimum waist of 108 mm. This means they can be used across several pairs of skis.

With two wider strips for extra traction, the hybrid FAT free skins can tackle tough ascents on the fattest of skis.

Including hybrid cleaning wipes and stuff sack with microfibre cloth to clean and dry ski base before applying skins.

PFOA-free impregnation to prevent water absorption and clumping

Mohair, the shorn wool of Angora goats ...

... is the basic fibre used for all of our skins.

Being one of the most unique natural fibres available, mohair has excellent properties for climbing skins.

With a diameter of just **0.03 mm** and hollow inside, mohair is extremely fine yet highly robust and durable. It remains supple and effective even in the coldest temperatures. The mohair yarn is produced in compliance with the mohair Sustainable Guidelines.

100% mohair with superior glide performance is used in hybrid pure, guide pure, guide race and guide speed skins.

The hybrid mix, hybrid FAT free, splitboard, guide mix and guide rent skins are made of **65% mohair / 35% synthetic blend** and offer not only good glide performance but also very high abrasion resistance.

**Qualität
made in Austria.**

Ultra-lightweight – the go-to choice for top athletes all over the world.

Combining both outstanding glide and climbing performance, these race mohair plush skins are specifically designed for racing, with tip attachments to fit all race skis with a notch.

The skins lie perfectly flush in the tip area to prevent snow ingress and are lightning fast to remove.

BRAND NEW

StiX by contour: ultra-stable, super-light, perfectly balanced.

The brand new StiX by contour combine everything that defines a perfect ski touring pole.

The soft grips with grip extensions guarantee safe handling even in wet conditions. The ultra-light, releasable straps provide for a comfortable grip, even without gloves. In addition, the reinforced edge on the grips makes it super easy to access the climbing aids with all kinds of bindings – whether ski touring, splitboard or snowshoe.

Inspired by the aircraft industry, StiX by contour are made of ultra-light, super-stable T6 aluminum and have a flex tip with carbide (98 Rockwell).

- ergo soft grip
- soft-grip extensions
- ultra-light wrist straps
- climbing aid hooks
- Double-Lock system
- ice scraper basket
- 7075 aluminum -T6

target group: ski touring, free-touring, freeriding

StiX²
by contour
